 - MyInt
 - List

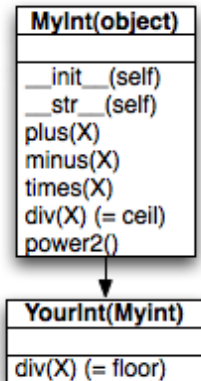

Lets look on the class again

- inheritance

```
class myC(object):  
    def __init__(self, a):  
        self.val = a  
    def __del__(self):  
        del self.val  
    def __str__(self):  
        return "My Value is: '%s'" % self.val  
    def func(self, b):  
        self.val *= b
```

Do it on your own

- create an object which includes the four basic calculation

know some recursive stuff

- Create the ListElement-object and the beginning of the list and then create a list
